

STRYOS Protects Your Valuable Shipments

Ensuring Safe and Compliant Delivery of Temperature-Sensitive Products

STRYOS
Data Logger

Enhancing Pharma Logistics with Precision Monitoring

STRYOS LLC specializes in cutting-edge temperature and humidity monitoring solutions, ensuring the safe and compliant transportation of pharmaceutical products. Our innovative single-use temperature loggers are designed with meticulous expertise to maintain product integrity, streamline cold chain logistics, and meet Good Distribution Practice (GDP) requirements.

We understand the critical role of temperature in the pharmaceutical supply chain. That's why we offer high-precision data loggers that meet the most stringent industry standards, ensuring compliance and traceability from production to delivery.

Our Expertise in Healthcare Logistics

Vaccines and Biologics

Maintain potency of temperature-sensitive vaccines, preserve integrity of biologics, and ensure compliance with WHO and GDP guidelines.

Clinical Trials

Maintain the quality of investigational drugs and samples during clinical trial phases, protect data integrity with tamper-proof loggers and automated reporting.

Medical Devices

Ensure safe transport of thermosensitive devices like diagnostic kits and surgical instruments, monitor environmental factors during storage and distribution.

Pharmaceuticals

Monitor storage conditions for over-the-counter and prescription drugs, guarantee stability of active ingredients during long-distance shipping, and provide reliable tools for auditing supply chains to meet regulatory demands.

Innolog LCD

Cutting-Edge Temperature Monitoring

Discover the ultimate solution for precise and reliable temperature monitoring, ideal for the pharmaceutical and food industries. The InnoLog LCD ensures accurate tracking and recording of temperature data, providing peace of mind for managing your sensitive products.

Innotrack

Redefining Cold Chain Management with Real-Time Temperature Monitoring

Welcome to Innotrack™, the cutting-edge real-time temperature recorder that revolutionizes cold chain management. With unparalleled accuracy and advanced features, Innotrack ensures your shipments are monitored and protected throughout their journey. Discover how Innotrack sets a new standard for cold chain solutions, empowering businesses with full visibility, efficiency, and product safety. Single use or Multi-use versions available.

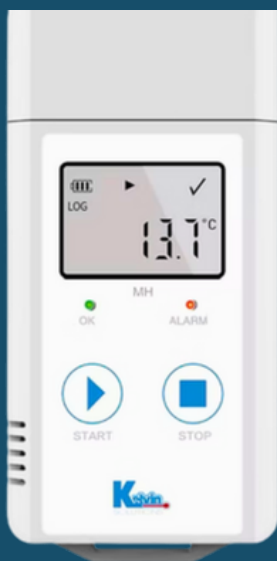

Innolog™ SU Data Logger

Pioneering Precision in Temperature Monitoring

The Innolog™ SU datalogger is a state-of-the-art temperature-measuring device, meticulously validated at six points to ensure precise accuracy. Equipped with an innovative self-calibrating sensor, it guarantees reliable and consistent temperature readings for your critical applications.

Designed with durability in mind, the Innolog™ SU comes with waterproof packaging, safeguarding the device and data in challenging environments. Its robust build allows it to withstand various conditions, making it a trustworthy companion during transportation and storage.

Innolog MTH humidity

RELIABLE solution for precise environmental monitoring

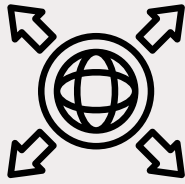

Compact & User-Friendly Temperature Monitoring: Our all-in-one data logger simplifies temperature and humidity tracking in a single compact device, ensuring controlled storage and transit conditions. Designed for effortless deployment, it comes pre-programmed and ready to use—simply unbox, activate, and start recording. With real-time alerts and an intuitive interface, it streamlines compliance and safeguards product integrity with ease.

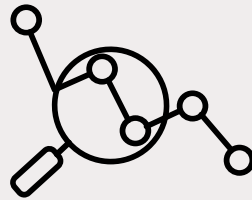

Innolog Pro

Advanced Cold Chain Traceability

Designed for international pharmaceutical logistics, Innolog Pro ensures precise temperature monitoring with advanced sensors for accurate, compliant data recording. Engineered for export operations, it delivers unparalleled performance in tracking and logging, guaranteeing full cold chain traceability from origin to destination.

Deploy

Traceable

Compliant

Our Key Features

- Easy Deployment – Plug-and-play solutions, pre-programmed for immediate use
- Real-time Traceability – Advanced logging capabilities to track temperature and humidity fluctuations
- Regulatory Compliance – Aligns with GDP, FDA, and international pharma logistics standards

Cloud Software – Intelligent Cold Chain Analytics

- Our cloud software is a user-friendly online database that allows companies to manage critical time and temperature information
- Users can easily share information in its FDA 21 CFR Part 11 compliant environment
- Every user and action is fully traceable, with data saved in a highly secure system
- The software integrates logistics data with temperature and time records, enabling advanced analytics and reporting to optimize cold chain performance

STRYOS Data Loggers – Ensuring Reliable Cold Chain Monitoring

- Regulatory Compliance: Meets GDP, HACCP, FDA, and ISO requirements.
- Accuracy & Reliability: Works even in extreme environments such as ultra-low freezers or tropical climates.
- User-Friendly Technology: Plug-and-play devices with intuitive interfaces.
- Global Coverage: Trusted by pharmaceutical companies and logistics service providers worldwide.
